

Dataprep: Qwik Start

GSP105

Overview

[Cloud Dataprep by Trifacta](#) is an intelligent data service for visually exploring, cleaning, and preparing data for analysis. Cloud Dataprep is serverless and works at any scale. There is no infrastructure to deploy or manage. Easy data preparation with clicks and no code!

In this lab you use Dataprep to manipulate a dataset. You import datasets, correct mismatched data, transform data, and join data. If this is new to you, you'll know what it all is by the end of this lab.

Setup and Requirements

Before you click the Start Lab button

Read these instructions. Labs are timed and you cannot pause them. The timer, which starts when you click **Start Lab**, shows how long Google Cloud resources will be made available to you.

This Qwiklabs hands-on lab lets you do the lab activities yourself in a real cloud environment, not in a simulation or demo environment. It does so by giving you new, temporary credentials that you use to sign in and access Google Cloud for the duration of the lab.

What you need

To complete this lab, you need:

- Access to a standard internet browser (Chrome browser recommended).
 - Time to complete the lab.
- Note:** If you already have your own personal Google Cloud account or project, do not use it for this lab.

Note: If you are using a Pixelbook, open an Incognito window to run this lab.

How to start your lab and sign in to the Google Cloud Console

1. Click the **Start Lab** button. If you need to pay for the lab, a pop-up opens for you to select your payment method. On the left is a panel populated with the temporary credentials that you must use for this lab.

[Open Google Console](#)

Caution: When you are in the console, do not deviate from the lab instructions. Doing so may cause your account to be blocked. [Learn more.](#)

Username
google2727032_student@qwiklabs.n 

Password
k68CZxsxMZ 

GCP Project ID
qwiklabs-gcp-4fbfecac8667e457 

[New to labs? View our introductory video!](#)

- Copy the username, and then click **Open Google Console**. The lab spins up resources, and then opens another tab that shows the **Sign in** page.

Sign in
Use your Google Account

[Forgot email?](#)

Tip: Open the tabs in separate windows, side-by-side.

If you see the **Choose an account** page, click **Use Another**

Choose an account

 Your.Email@gmail.com

 google1381214_student@qwiklabs.net
Signed out

 **Use another account**

Account.

3. In the **Sign in** page, paste the username that you copied from the Connection Details panel. Then copy and paste the password.

Important: You must use the credentials from the Connection Details panel. Do not use your Qwiklabs credentials. If you have your own Google Cloud account, do not use it for this lab (avoids incurring charges).

4. Click through the subsequent pages:

- Accept the terms and conditions.
- Do not add recovery options or two-factor authentication (because this is a temporary account).
- Do not sign up for free trials.

After a few moments, the Cloud Console opens in this tab.

Note: You can view the menu with a list of Google Cloud Products and Services by clicking the **Navigation menu** at the top-left.

Check project permissions

Before you begin your work on Google Cloud, you need to ensure that your project has the correct permissions within Identity and Access Management (IAM).

1. In the Google Cloud console, on the **Navigation menu** () , click **IAM & Admin > IAM**.
2. Confirm that the default compute Service Account `{project-number}-compute@developer.gserviceaccount.com` is present and has the `editor` role assigned. The account prefix is the project number, which you can find on **Navigation menu > Home**.

<input type="checkbox"/>	admiral@qwiklabs-services-prod.iam.gserviceaccount.com		Owner
<input type="checkbox"/>	qwiklabs-gcp-03-1df6c0aeaf28@appspot.gserviceaccount.com	App Engine default	Editor

If the account is not present in IAM or does not have the `editor` role, follow the steps below to assign the required role.

- In the Google Cloud console, on the **Navigation menu**, click **Home**.
- Copy the project number (e.g. 729328892908).
- On the **Navigation menu**, click **IAM & Admin > IAM**.
- At the top of the **IAM** page, click **Add**.
- For **New members**, type:

```
{project-number}-compute@developer.gserviceaccount.com
```

Replace `{project-number}` with your project number.

- For **Role**, select **Project (or Basic) > Editor**. Click **Save**.

SAVE CANCEL

Create a Cloud Storage bucket in your project

1. In the Cloud Platform Console, select **Navigation menu** > **Storage** > **Browser**.

2. Click **Create bucket**.
3. In the **Create a bucket** dialog, **Name** the bucket a unique name. Skip the other steps to leave those settings at their default value.

 Create a bucket

- **Name your bucket**

Pick a **globally unique**, permanent name. [Naming guidelines](#)

example_bucket_100

Tip: Don't include any sensitive information

CONTINUE
- **Choose where to store your data**
- **Choose a default storage class for your data**
- **Choose how to control access to objects**
- **Advanced settings (optional)**

CREATE

CANCEL

For more information about naming buckets, see [bucketname requirements](#).

4. Click **Create**.

You created your bucket. Remember the bucket name for later steps.

Test Completed Task

Click **Check my progress** to verify your performed task. If you have successfully created Cloud Storage bucket, you see an assessment score.

Initialize Cloud Dataprep

1. Select **Navigation menu > Dataprep**.
2. Check to accept the Google Dataprep Terms of Service, then click **ACCEPT**.
3. Check to authorize sharing your account information with Trifacta, then click **Agree and Continue**.
4. Click **Allow** to allow Trifacta to access project data.
5. Click your Google Cloud username to sign in to Cloud Dataprep by Trifacta. Your Google Cloud username is **Username** in the left panel in your lab.
6. Click **Allow** to grant Cloud Dataprep access to your Google Cloud lab account.
7. Check to agree to Trifacta Terms of Service, and then click **Accept**.
8. Click **Continue** on the "First time set up" screen to create the default storage location.

First time set up

 **Cloud Dataprep** by TRIFACTA

Cloud Dataprep requires a location to save files you upload or create within Dataprep.

By default, the following storage location is used.

[Change](#)

Click *Continue* to complete setup for this project.

Project: qwiklabs-gcp-04-687153071bec [Change project](#)

Continue

Dataprep opens in a new browser tab. A tutorial will launch, asking you to select datasets. Quit out of this screen by clicking **Cancel** or exiting out.

Click on the Dataprep icon on the top left corner to go to the home screen.

Test Completed Task

Click **Check my progress** to verify your performed task. If you have successfully initialized Cloud Dataprep with default storage location, you see an assessment score.

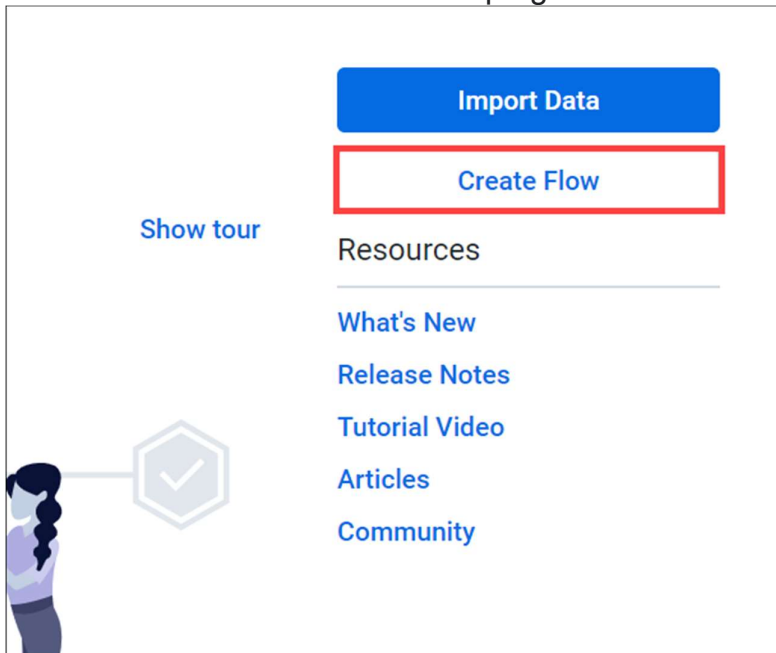

Initialize Cloud Dataprep

Check my progress

Create a flow

Cloud Dataprep uses a `flow` workspace to access and manipulate datasets.

1. Click on flows in left navigation rail.
2. Click **Create Flow** in the top right:

2. Choose Blank.
3. click on untitled to change flow name and description.
4. Name and describe the flow. Since this lab uses 2016 data from the [United States Federal Elections Commission 2016](#), name the flow "FEC-2016", and the describe the flow as "United States Federal Elections Commission 2016".

Rename

Flow Name

Dataset

Campaign Contributions 2016

Prep the candidate file

1. By default, the Candidate Master 2016 dataset is selected. In the right pane, click **Edit Recipe**.

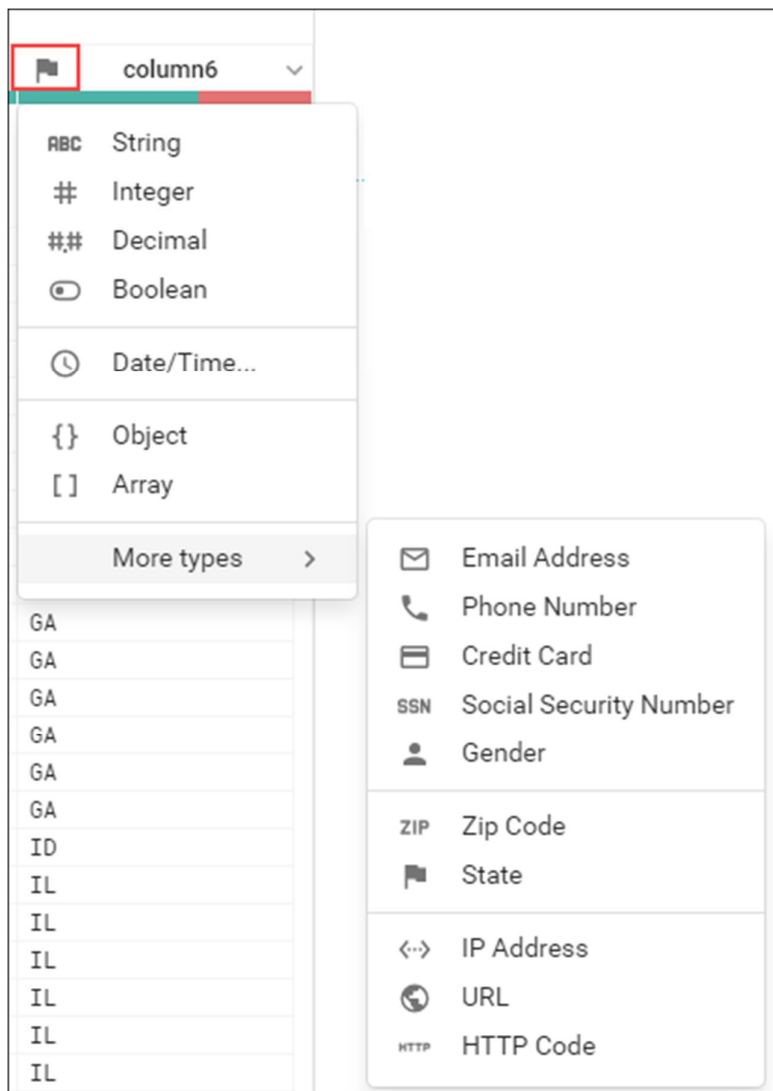

The Candidate Master 2016 Transformer page opens in the grid view.

The screenshot shows the Alteryx Candidate Master 2016 Transformer page in grid view. The top bar shows 'FEC-2016 > Candidate Master 2016' and an 'Initial data' button. The right side has a search icon, a list icon, a refresh icon, and a 'Run Job' button. The main area shows a grid of 9 columns, each with a histogram and a list of categories. The columns are labeled 'column2' through 'column9'. The data is filtered to show 10 rows of sample data.

RBC	column2	RBC	column3	RBC	column4	column5	column6	RBC	column7	#	column8	RBC	column9
	5,332 Categories		5,295 Categories		93 Categories	2015 - 2019 3286 61.63%	53 Categories		2 Categories		0 - 92		3 Categories
-	H0AK00097		COX, JOHN R.		REP	2014	AK		H				00 C
-	H0AL02087		ROBY, MARTHA		REP	2016	AL		H				02 I
-	H0AL02095		JOHN, ROBERT E JR		IND	2016	AL		H				02 C
-	H0AL05049		CRAMER, ROBERT E "BUD" JR		DEM	2008	AL		H				05

Suggestions

Delete columns

column6

Rename

Rename column6 to 'column6'

Create a new column

ANY(column6)

Set

mismatched values to "

missing values to "

Click **X** in the top right of the Details panel to close the Details panel.

In the following steps, you explore data in the grid view and apply transformation steps to your recipe.

- Column5 provides data from 1990-2064. Widen column5 (like you would on a spreadsheet) to separate each year. Click to select the tallest bin, which represents year 2015.

This creates a step where these values are selected.

- Click on a dot at start of any row. In the **Suggestions** panel on the right, in the **Keep rows** section, click **Add** to add this step your recipe.

Suggestions

Keep rows

where (DATE(2015, 1, 1) <= column5) && (column5 < DATE(2020, 1, 1))

EditAdd

Delete rows

where (DATE(2015, 1, 1) <= column5) && (column5 < DATE(2020, 1, 1))

Set

Set column5 to IF((DATE(2015, 1, 1) <= column5) && (column5 < DATE(2020, 1, 1)), NULL(), \$col)

Create a new column

(DATE(2015, 1, 1) <= column5) && (column5 < DATE(2020, 1, 1))

The Recipe panel on the right now has the following step:

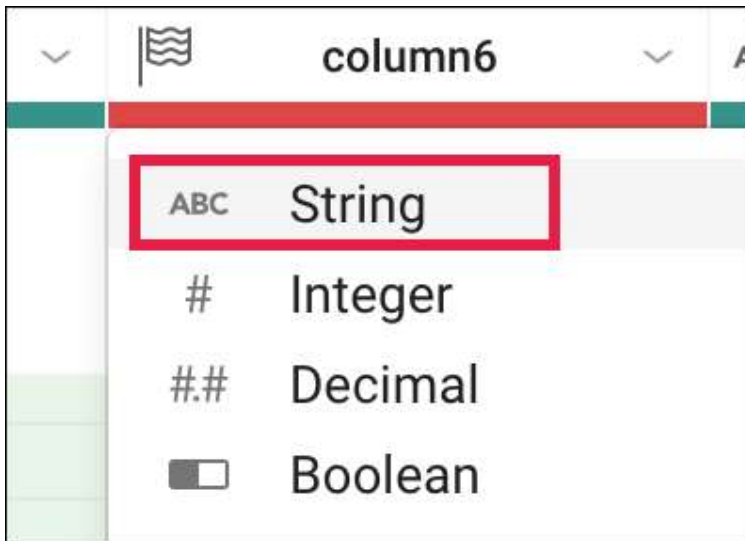

Keep rows where (DATE(2015, 1, 1) <= column5) && (column5 < DATE(2020, 1, 1))

- In Column6 (State), hover over and click on the mismatched (red) portion of the header to select the mismatched rows.

Scroll down to find the mismatched values and notice how most of these records have the value "P" in column7, and "US" in column6. The mismatch occurs because column6 is marked as a "State" column (indicated by the flag icon), but there are non-state (such as "US") values.

- To correct the mismatch, click **X** in the top of the Suggestions panel to cancel the transformation, then click on the flag icon in Column6 and change it to a "String" column.

There is no longer a mismatch and the column marker is now green.

6. Filter on just the presidential candidates, which are those records that have the value "P" in column7. In the histogram for column7, hover over the two bins to see which is "H" and which is "P". Click the "P" bin.

7. In the right Suggestions panel, click **Add** to accept the step to the recipe.

Keep rows

where column7 == 'P'

EditAdd

Join the Contributions file

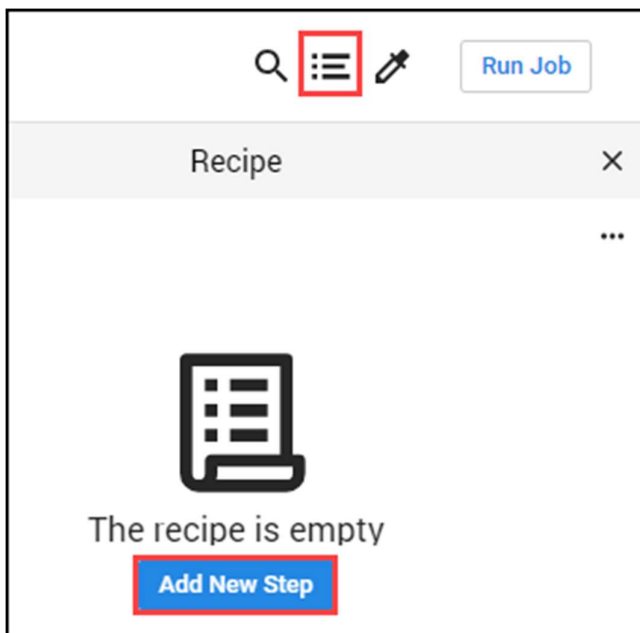

On the Join page, you can add your current dataset to another dataset or recipe based on information that is common to both datasets.

Before you join the Contributions file to the Candidates file, clean up the Contributions file.

1. Click on **FEC-2016** (the dataset selector) at the top of the grid view page.

2. Click to select the grayed out **Campaign Contributions**.
3. In the right pane, click **Add > Recipe**, then click **Edit Recipe**.
4. Click the **recipe** icon at the top right of the page, then click **Add New Step**.

Remove extra delimiters in the dataset.

5. Insert the following Wrangle language command in the Search box:

```
replacepatterns col: * with: ' ' on: `{start}"|"{end}` global: true
```

The Transformation Builder parses the Wrangle command and populates the Find and Replace transformation fields.

14. Click **Review**, and then **Add to Recipe** to return to the grid view.

Summary of data

Generate a useful summary by aggregating, averaging, and counting the contributions in Column 16 and grouping the candidates by IDs, names, and party affiliation in Columns 2, 24, 8 respectively.

1. At the top of the Recipe panel on the left, click on **New Step** and enter the following formula in the **Transformation** search box to preview the aggregated data.

```
pivot value:sum(column16),average(column16),countif(column16 > 0) group:
column2,column24,column8
```

An initial sample of the joined and aggregated data is displayed, representing a summary table of US presidential candidates and their 2016 campaign contribution metrics.

Rename columns

You can make the data easier to interpret by renaming the columns. Add each of the renaming and rounding steps individually to the recipe by clicking **New Step**, then enter:

```
rename type: manual mapping: [column24,'Candidate_Name'],  
[column2,'Candidate_ID'],[column8,'Party_Affiliation'],  
[sum_column16,'Total_Contribution_Sum'], [average_column16,'Average_Contribution_Sum'],  
[countif,'Number_of_Contributions']
```

Then click **Add**.

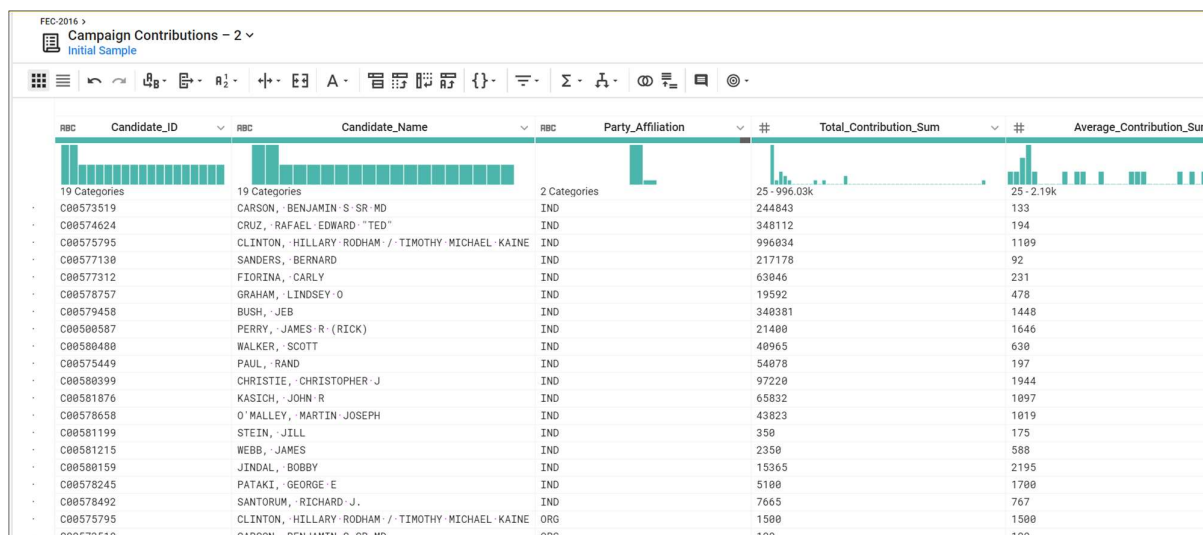

Add in this last **New Step** to round the Average Contribution amount:

```
set col: Average_Contribution_Sum value: round(Average_Contribution_Sum)
```

Then click **Add**.

Your results look something like this:

FEC-2016 >
Campaign Contributions - 2
Initial Sample

Candidate_ID	Candidate_Name	Party_Affiliation	Total_Contribution_Sum	Average_Contribution_Sum

Congratulations!

You used Dataprep to add a dataset and created recipes to wrangle the data into meaningful results.

Next Steps / Learn More

This lab is part of a series of labs called Qwik Starts. These labs are designed to give you a little taste of the many features available with Google Cloud. Search for "Qwik Starts" in the [lab catalog](#) to find the next lab you'd like to take!

Google Cloud Training & Certification

...helps you make the most of Google Cloud technologies. [Our classes](#) include technical skills and best practices to help you get up to speed quickly and continue your learning journey. We offer fundamental to advanced level training, with on-demand, live, and virtual options to suit your busy schedule. [Certifications](#) help you validate and prove your skill and expertise in Google Cloud technologies.
